Top 30 JavaScript Interview Questions and Answers

1. What is a closure in JavaScript?

A closure is a function that has access to its own scope, the outer function's scope, and the global scope.

2. Explain event delegation.

Event delegation allows handling events at a higher level in the DOM rather than on individual nodes.

3. Difference between '==' and '==='?

'==' allows type coercion, while '===' requires both type and value to be the same.

4. What is the difference between var, let, and const?

'var' is function scoped, 'let' and 'const' are block scoped. 'const' cannot be reassigned.

5. What is a promise in JavaScript?

A Promise represents the eventual result of an asynchronous operation.

6. What are arrow functions?

Arrow functions are a shorthand way to write functions using the => syntax.

7. What is the 'this' keyword in JavaScript?

'this' refers to the object that is executing the current function.

8. What is hoisting in JavaScript?

Hoisting is JavaScript's default behavior of moving declarations to the top.

Top 30 JavaScript Interview Questions and Answers

9. What is the use of the async/await keywords?

They are used to write asynchronous code that looks synchronous.

10. What is the difference between null and undefined?

null is an assignment value, while undefined means a variable has been declared but not assigned.

11. What is the event loop in JavaScript?

The event loop handles the execution of multiple chunks of code over time.

12. What is the difference between call, apply, and bind?

call and apply invoke functions immediately; bind returns a new function.

13. What are template literals?

Template literals allow embedded expressions and multi-line strings using backticks.

14. What is destructuring?

Destructuring is a way to extract values from arrays or properties from objects.

15. What is the spread operator?

It allows an iterable to expand in places where 0+ arguments or elements are expected.

16. What is the difference between map and forEach?

map returns a new array, forEach does not return anything.

Top 30 JavaScript Interview Questions and Answers

17. What are higher-order functions?

Functions that take other functions as arguments or return functions.

18. What is JSON?

JSON is a format for storing and transporting data.

19. What is localStorage?

localStorage allows saving key/value pairs in a web browser with no expiration.

20. What is a callback function?

A function passed into another function as an argument to be executed later.

21. What is a prototype?

A prototype is an object from which other objects inherit properties.

22. What is the difference between function declaration and expression?

A declaration is hoisted, an expression is not.

23. What is NaN in JavaScript?

NaN stands for Not-a-Number and results from invalid math operations.

24. What is the use of the typeof operator?

typeof returns the type of a variable.

Top 30 JavaScript Interview Questions and Answers

25. What are promises states?

Pending, Fulfilled, and Rejected.

26. What is a Symbol in JavaScript?

Symbol is a primitive data type for unique identifiers.

27. What is the difference between sync and async functions?

Sync functions block the thread, async functions do not.

28. What is the 'use strict' directive?

'use strict' helps catch common coding mistakes and prevents unsafe actions.

29. What is a generator function?

A generator function can pause execution and resume later using yield.

30. What are JavaScript data types?

String, Number, BigInt, Boolean, Undefined, Null, Symbol, Object.
